Updated Backend API List

CRM, billing, Daily Sales, supplier ledger, and profit reporting | 9 November 2026

Base URL
{{baseUrl}} = http://localhost:3000/api/v1

Authentication
All endpoints below require `Authorization: Bearer <token>`.

GET requests
GET endpoints have no request body. Use the query parameters or path ID shown below.

Billing and product endpoints

METHOD	ENDPOINT	INPUT / PURPOSE
POST	/customer-payments	Record a Cash, UPI, or Coupon payment against a sale. Repeat once per tender mode using the same saleId for split payments.
POST	/supplier-payments	Record a Cash or UPI payment against a purchase.
PATCH	/products/:id	Update product fields including unitId. Unit changes are accepted when current stock is valid for the selected unit.

Example: customer payment

```
{
"customerId": "{{customerId}}",
"saleId": "{{saleId}}",
"amount": 500,
"method": "CASH",
"notes": "Optional note"
}
```

Allowed methods: CASH, UPI, COUPON. Optional field: paymentDate (ISO 8601). Each payment amount is checked against the invoice balance.

Example: supplier payment

```
{
"supplierId": "{{supplierId}}",
"purchaseId": "{{purchaseId}}",
"amount": 500,
"method": "UPI",
"notes": "Optional note"
}
```

Example: change product unit

```
{
"unitId": "{{unitId}}"
}
```

Reports and dashboard

METHOD	ENDPOINT	INPUT / PURPOSE
GET	/reports/daily-sales?date=YYYY-MM-DD	Payments actually received on that business date, grouped by invoice with product lines and per-mode payment details. Unpaid credit is excluded until paid.
GET	/reports/sales?from=...&to;=...	Date-range sales totals and invoices, including product lines, historical units, and recorded payments.
GET	/reports/profit?from=...&to;=...	Item profit, total expenses, and final profit for the date range.
GET	/reports/suppliers/outstanding	Supplier list with aggregate outstanding balances.
GET	/reports/suppliers/:id/ledger	One supplier purchase/payment history and aggregate outstanding balance. Replace :id with supplier UUID.
GET	/dashboard/summary?month=YYYY-MM	CRM Overview totals, balances, monthly sales count, daily paid/credit chart, and latest sales. month is optional.

Query examples

```
GET {{baseUrl}}/reports/daily-sales?date=2026-11-09
GET
{{baseUrl}}/reports/sales?from=2026-11-01T00:00:00%2B05:30&to=2026-11-09T23:59:59%2B05:30
GET
{{baseUrl}}/reports/profit?from=2026-11-01T00:00:00%2B05:30&to=2026-11-09T23:59:59%2B05:30
GET {{baseUrl}}/reports/suppliers/{{supplierId}}/ledger
GET {{baseUrl}}/dashboard/summary?month=2026-11
```

Implementation notes

Daily Sales is payment-date based, so credit appears only when money is received. New sale lines preserve the purchase rate and unit used at sale time. Profit reports use those cost snapshots; older sales without a snapshot use the product's current purchase rate.

The database migration must be applied before deploying these schema changes. Coupon payments can be recorded as a tender mode, but coupon validation/redemption rules remain pending client feedback. The Customer Outstanding report endpoint was removed; supplier outstanding and supplier ledger endpoints remain available.
